SUMMARY

I have experience in Salesforce queues and DocuSign workflows for advisors, and I am looking for business operations and CRM systems roles.

PROFESSIONAL EXPERIENCE

Wealth Operations Specialist Intern | Signal Advisors — Detroit, MI | 05/2026 – 08/2026

- Set up automated DocuSign workflows in Salesforce for 150+ advisors, cutting packet review from 60 to 20 minutes.
- Fixed a Salesforce queue collision between trading and service desks, preventing 10 critical SLA breaches.
- Mapped account workflows from initial Salesforce submission through execution in Orion Eclipse.
- Managed Salesforce ticketing queues and worked with custodians to resolve advisor requests within 1 to 2 hour SLAs.

Operations Consultant | 40 Acres — Detroit, MI | 04/2026 – 05/2026

- Planned the approach to SEC Form D and Regulation Crowdfunding filings and explained what each one covers.
- Set up compliance intake checkpoints and suitability reviews for incoming platform investors.
- Read property documentation and title records and explained which custodial fields applied to each offering.

Financial Planning Intern | Northwestern Mutual — Grand Rapids, MI | 05/2025 – 08/2025

- Prepared financial planning proposals and led 15+ prospecting reviews under RIA suitability guidelines.
- Verified client financial profiles with institutional custodians to speed up account transfers.
- Tracked onboarding paperwork exceptions and cleared documentation hold-ups with partner firms.

Total Rewards Finance Intern | ABC Technologies — Southfield, MI | 05/2024 – 08/2024

- Reconciled employee 401(k) and healthcare deduction variances across 500+ accounts in bSwift and Excel.
- Built structured audit checklists to cross-reference multi-plant payroll data, catching recurring 401(k) deduction errors across 70+ manufacturing facilities.
- Prepared and maintained supporting schedules for variance analysis and recurring internal financial reports.

TECHNICAL PROJECTS

Document Automation Pipeline & Custom CRM | Source — Detroit, MI | 07/2026 – Present

- Built a Python pipeline that pulls postings from job-board REST API data feeds, normalizes each into a common record format and loads it into a SQLite database and a Google Sheets CRM.
- Scored each posting with a deterministic Gemini layer; a Telegram command drafts the PDF and Gmail follow-up.
- Wrote 1,100+ lines of Google Apps Script that run a Google Sheets CRM, auto-populating and routing every record as the pipeline updates it.
- Scheduled nightly Python jobs that check every tracked posting for a dead link and queue each day’s follow-up emails.
- Built first-party visitor analytics for montelattice.com: each pageview is bot-filtered, given a daily hashed visitor ID, tagged with its referrer host and stored in SQLite, then summarized in a daily Telegram report.
- Uses SQL through Python’s sqlite3 module to read and write a SQLite job database.

Market Breakout Alert and Real Time Paper Trading Engine | Source — Detroit, MI | 04/2026 – 08/2026

- Built a concurrent Python backend on SQLite in WAL mode with explicit write locks to process live exchange data and manage virtual portfolios.
- Engineered a real time WebSocket reconciliation feed and historical backtester for automated breakout detection and simulated execution.

EDUCATION & CREDENTIALS

B.A. Business (Finance), B.A. Political Science, Hope College — Holland, MI | 08/2022 – 05/2026

Certificates & Licenses: Series 65 (Expected Q4 2026), Securities Industry Essentials (SIE), Schwab Limited Power of Attorney, Bloomberg Market Concepts

Leadership & Activities: Secretary, Student Political Organization • Member, Economic Club of Grand Rapids • Varsity Cross Country & Track (2 years) • Taught peers to host their own websites at no cost
